Dias Gazimov: 200103360

LINK TO MY PROJECT: <https://github.com/Gvzum/dias-store>

Refactored a lot of moments. Deleted viper configuration from project. And now I provide 2 endpoints for authentication.

- sign-in - endpoint for login. Provide your email and password. After this will give you a token.
- sign-up - endpoint for registration user. Provider email, name and password. After this will create a user.
